EDUCATION

University of California, Berkeley

Berkeley, CA

Bachelor of Science, Electrical Engineering and Computer Science

May 2028

Bachelor of Science, Industrial Engineering and Operations Research

EXPERIENCE

Systems Software Engineering Intern

June 2026 – Present

Safety in Numbers: Startup automating compliance for safety-critical engineering

Berkeley, CA

- Built LLM extraction pipeline (Claude + Gemini APIs) parsing safety standards into structured, machine-checkable requirement registries, targeting bottleneck where missed requirements force costly downstream rework
- Designed a deterministic verification layer that checks extracted requirements against source text, including grounding, ID enumeration, completeness, and recovery of dropped tasks
- Prototyped and built ground-truth registry approach end-to-end; results led the founders to reorient the product direction around it

EECS Student Researcher

Feb. 2026 – Present

Algorithms & Computing for Education (ACE) Lab

Berkeley, CA

- Co-developing AutoRemind, a cross-platform notification system for UC Berkeley EECS, automating personalized academic task reminders at scale
- Designed and deployed user surveys across 5+ EECS/CDSS courses to evaluate product effectiveness

Software Engineer

Feb. 2026 – June 2026

Space Technologies at Cal

Berkeley, CA

- Developed flight software for a NASA-funded satellite testing a quantum gyroscope
- Engineered command execution framework supporting 6+ mission-critical operations, including beacon transmission, payload initialization, burn wire activation, and ground communication

Web Developer

Sep. 2025 – Jan. 2026

Berkeley Institute of Industrial and System Engineers

Berkeley, CA

- Conducted usability audits and user testing with 15+ participants, identifying 10+ critical UX issues
- Redesigned and rebuilt key site features in Framer, directly supporting grant-funding outcomes worth \$20,000+

Software Developer

Feb. 2026 – Present

Mobile Developers of Berkeley

Berkeley, CA

- Developing cross-platform mobile applications using React Native in a project-based engineering program

Quantum Software, BeaverWorks Summer Institute

Feb. 2024 – Aug. 2024

MIT Lincoln Laboratory

- Implemented quantum algorithms (Grover's, Shor's, QFT) in Qiskit code
- Co-developed a variational quantum classifier improving fraud detection accuracy by 12% through optimized data encoding

PROJECTS

SafeDose | *React Native, TypeScript, Firebase*

- Developed full-stack medication management mobile app (React Native, Firebase) supporting patient and caregiver roles with real-time synchronization
- Integrated Claude Haiku Vision API to identify medications from images, auto-fill dosages, and verify prescriptions to reduce user error
- Designed adherence tracking system with automated low-supply alerts and live caregiver dashboard

TECHNICAL SKILLS

Languages: Python, Java, C/C++, TypeScript, JavaScript, SQL (Postgres), MATLAB

Frameworks: React, React Native, Node.js, FastAPI

Developer Tools: Git, Jupyter Notebook

Libraries: pandas, NumPy, Matplotlib
